

# Energy Efficiency

cleaner fluids mean better business

*Oil before and after filtration*

## Hidden Oil Fields

**If oils and lubricants are kept clean, oil life can be extended significantly.**

FTA fine filtration, removes the contamination that causes wear, allowing the lubricant to work at its full potential longer! Changing fluids on condition as opposed to time, benefits the environment and your bottom line!

### **ENERGY EFFICIENCY REPORTING**

Reporting energy, carbon emissions, and abatement is now a mainstream business obligation for many organisations.

But this is only the first step for companies wanting to reduce their carbon footprint and operating costs.

A successful program will reduce energy consumption and operating costs, carbon emissions and liabilities whilst improving conditions, operating efficiencies and productivity.

*FTA 40460 fixed filtration system*
