Dear Don,

I would like to thank you for introducing us to the Filter Technology crusher oil filtration systems.

We recently carried out a toggle replacement on our Kemco jaw crusher. When we opened up the toggle system we were amazed at the state of the oil. Usually when we would open the toggle system the oil would be black and there would be a considerable build up of deposits at the bottom. This time when the toggle system was opened up, the oil appearance was the same as new oil and there was no build up on the bottom.

A JQ440 filtration unit was fitted to our Kemco primary crusher in November 2000 and in February 2001 a JQ340 filtration unit was fitted to one of our Allis/Sevdala secondary crushers. Since fitting the filters our maintenance staff regularly report that they are amazed at how clean the crusher oil is and at how much contamination is removed by the filters.

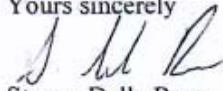

Having seen how well the Filter Technology filters have performed on two of our crushers, we decided in July 2001 to fit the filters to our Jaques tertiary crusher and the other Allis/Sevdala secondary crusher. All four crushers at our Byford quarry now have Filter Technology filtration.

When you first presented your product to me, I did not believe your claims of keeping crusher oils in an "as new state". Your offer of a trial period suggest that you believed in your product and were prepared to show us a practical demonstration of its ability to keep crusher oil clean. The Contatore Engineering letter convinced us that we should give the filters a go.

It is now nine (9) months since the trial was completed and we are convinced that the Filter Technology filtration systems will enable us to keep our crusher oils in an as new state. It is common knowledge in the plant and machinery maintenance industry that clean oil means less wear and tear. With Filter Technology filtration keeping our crusher oils in an "as new state" we will easily achieve longer internal component life, higher plant availability rates and therefore an improved bottom line.

We have no hesitation in recommending the Filter Technology crusher oil filtration systems to other crusher owners and operators.

Yours sincerely

Steven Della Bona

Manager
