Engine Oil and Fuel Filtration : Concrete Recyclers, Sydney

Concrete Recyclers Sydney

Located in three sites in Sydney, Concrete Recyclers are aware of the need to lower waste streams on all sites and keep visual emissions of their equipment to a minimum.

By installing FTA's fuel and bypass oil filters on their 11 excavators, 7 loaders and 2 gensets has seen engine oil drains go from 250 to 500 hours Also the 2 screening plants and 3 cone crushers hydraulic systems has seen oil drain from 500 to 2000 hours dramatically decreasing waste streams on all sites.

As the machines are all fitted with FTA fuel filters this has seen the visual emissions decreased as fuel being delivered to the machines fuel injection system is kept constantly clean.
