Filtration and Contamination Control Specialists

FM60862 Hydraulic Filtration Unit

Mobile unit designed to suit kidney looping plant hydraulics systems

Features:

- Pressure driven variable drive.
- Heater mounted under the filter housings.
- Element change light
- Fork lift lugs to allow easy movement.
- Two hose reels with 8 metres of 3/4" hose on the inlet and return reel.
- Tool box for fittings.
- Hose stored on quick release couplings on the machine.
- Mounted on a heavy duty, powder coated frame
- 3 Silicone filled wheels

Filters:

- 8 x FM3204 industrial filter units

Function

Oil Applications:

FTA Buggies are typically used for large hydraulic reservoirs on heavy equipment, gearboxes and final drives. Their kidney loop system and quick release couplings allow easy movement between machines in industrial sites allowing machinery to be filtered while the machine is still in service. They can also be used to filter new oil from the drum into the machine.
